Andrew Solomon | Resume

Software Developer

Location Atlanta, Georgia
Email hi@andrewsolomon.dev
Portfolio Apps

Summary

Senior Salesforce Engineer with 15+ years of software development experience and 20+ full end-to-end Salesforce implementations. Deep Apex specialist across trigger frameworks, asynchronous processing, batch integrations, fflib patterns, governor-limit optimization, and enterprise test architecture. Expert in Lightning Web Components, Apex, 2nd-generation packages, and Experience Cloud. Proven track record leading technical teams, establishing engineering standards, and delivering enterprise-scale solutions for Fortune 500 companies and federal agencies, including the VA. Security-first approach with deep expertise in sharing models, persona-based testing, CRUD/FLS enforcement, and least-privilege Apex design. Holds an active national security clearance.

Technical Skills

- **Salesforce:** Apex, LWC, SOQL, SOSL, Trigger Frameworks, Async Apex, fflib, Experience Cloud, OmniStudio, 2GP Packages, Flow, Platform Events, Change Data Capture, Named Credentials, External Credentials, Query Plan, custom indexes, selective queries, large data volumes, data skew, Event Monitoring, HttpCalloutMock, Stub API
- **Design:** Figma, SLDS 2, Design Tokens, IBM Carbon Design System
- **AI:** OpenAI, Anthropic SDK, AI Agents, Harness Engineering, MCP
- **Agent:** AWS Bedrock, AWS Bedrock AgentCore
- **DevOps:** GitHub Actions, SonarQube, SFDX, Vercel, Jest, Playwright, Docker
- **Frontend:** TypeScript, React, Next.js, Tailwind, GraphQL, ThreeJs, LWC
- **Backend:** Node, Java, Java Spring Boot, Supabase, Cloudflare Workers, Vercel Functions, REST APIs, integration middleware, AWS S3, AWS DynamoDB

Experience

Senior Salesforce Engineer - Thrivent Financial 2024 – Present

· Built and scaled 2GP package pipelines across 33+ repositories, managing multiple SFDX projects in parallel across multi-tier environments

· Developed Lightning Web Components with GraphQL and Apex service layers that integrate with Java-based connected apps for external clients

· Architected a Salesforce Bulk API 2.0 + Amazon S3 pipeline that streams large-scale query results to S3 and generates custom object artifacts for downstream packaging and analytics

· Owned GitHub Actions workflows and build maintenance; configured reports and dashboards across the platform

· Established design alignment mapping between Figma, SLDS 1, and SLDS 2 to standardize tokens across the design system

· Established Apex and LWC testing standards, including dependency-isolated unit tests, templated Jest guidance, and Playwright browser automation for end-to-end coverage

· Mentored engineers on AI engineering and modern Node/TypeScript across platform, web, and internal dev tooling

· Authored engineering, DevOps, and Salesforce documentation; drove cross-team feedback loops with design and customers in Agile/Kanban

· Wrote selective SOQL against large-data-volume objects. Used the Query Plan tool to validate selectivity and set custom indexes where needed.

· Diagnosed and mitigated ownership and lookup data skew to prevent record-lock contention and sharing-recalculation problems.

· Built event-driven integrations on Platform Events and Change Data Capture,
with idempotent processing (dedupe keys, safe retries) to guard against duplicate or replayed messages.

· Secured outbound callouts with Named Credentials and External Credentials, keeping secrets and auth out of Apex code.

· Led production triage in live orgs using debug logs and Event Monitoring. Reproduced issues across sandboxes and orgs and resolved failed deployments independently.

Senior Salesforce Developer - MagMutual 2023 – 2024

· Led development of Lightning Web Components platform serving 10,000+ healthcare professionals, improving user engagement by 30%

· Architected enterprise Git workflow system with GitHub Actions, reducing deployment time by 40% across 5 development teams

· Developed Apex-backed real-time analytics dashboard processing 1M+ daily transactions with 99.9% uptime

· Implemented Apex and Jest testing suites achieving 95% code coverage and WCAG 2.1 compliance

· Built GraphQL-powered headless CMS integration, reducing content update time by 60%

· Designed component library based on IBM Carbon Design System, deployed across 3 customer-facing applications

· Built integrations between Salesforce and external systems through integration middleware.

Senior Salesforce Developer - Department of Veterans Affairs – PSIP 2022 – 2023

· Designed and delivered a Salesforce case management system for VA Personnel Security & Investigations Program (PSIP)

· Built an Experience Cloud portal for 10,000+ applicants to submit forms and track case status

· Architected queue-based sharing and case assignment for 500+ investigators

· Implemented Apex-based SSO/JIT provisioning and Queueable permission set orchestration with resilient retry and error handling patterns

· Hardened Apex document access and test coverage with Security.stripInaccessible(), CRUD/FLS checks, sharing enforcement, and persona-based testing patterns

Salesforce Developer - Department of Veterans Affairs – VBA QMS 2021 – 2022

· Refactored 15+ test classes to least-privilege, persona-based security testing

· Implemented fflib Selector, Domain, and Service patterns with CRUD/FLS enforcement across SOQL query paths

· Replaced custom Apex permission checks with FeatureManagement.checkPermission() and modernized Workflow Rules to before-save Flows

· Improved Apex test scores by 25-40 points, eliminated MIXED_DML_OPERATION failures via @testSetup, and stabilized tests around least-privilege users

· Set criteria for choosing Flow or Apex, and resolved conflicts between automations by applying the Salesforce order of execution.

· Isolated callout-dependent Apex in tests with HttpCalloutMock and the Stub API, covering success, failure, and bulk paths.

Lead Frontend Engineer - CodeScience 2018 – 2022

· Delivered enterprise Salesforce solutions for Fortune 500 clients including RingCentral and Ford, serving 50,000+ daily users

· Led UI and Apex architecture for 15+ projects using TypeScript, LWC, service classes, and trigger patterns, establishing core design systems

· Core contributor to Salesforce DevOps Center, improving deployment efficiency for 1000+ organizations

· Designed Apex integration and orchestration layers for AppExchange-grade managed package features while implementing Redux state management patterns that reduced component complexity by 40%

· Mentored team of 8 developers in modern JavaScript practices and Salesforce development

· Mocked HTTP callouts with HttpCalloutMock and the Stub API to test AppExchange-grade managed-package integration code without live endpoints.

Senior JavaScript Developer - CNN 2018

· Developed cross-platform applications reaching 2M+ daily users across iOS, Roku, and Samsung devices

· Built real-time news delivery system using React and Node, handling 100K+ concurrent users
· Reduced application load time by 45% through performance optimization
· Led UI development for CNN's streaming platform launch

Senior Software Engineer - Cox Automotive 2014 – 2018

· Architected Node microservices processing 500K+ daily automotive transactions
· Led team of 6 frontend engineers, developing component library used across 20+ applications
· Built React-based auction check-in system deployed to 100+ locations nationwide
· Developed full-stack applications using Java Spring Boot, serving 50K+ automotive dealers

Lead Frontend Developer - Look-Listen 2013

· Led frontend development for 10+ major brands including Alternative Apparel and Matchstic
· Implemented responsive design system reducing mobile bounce rate by 35%
· Established modern development workflow with Node and Sass, improving team velocity by 50%
· Built social media integration platform handling 100K+ daily API calls
· Managed AWS infrastructure supporting 1M+ monthly active users

Senior Software Developer - Paper Tiger 2010 – 2013

· Developed SaaS platform serving 20K+ users with PHP and JavaScript
· Implemented Google Docs API integration processing 50K+ documents monthly
· Built single-page application improving customer support efficiency by 40%
· Designed Ruby on Rails asset pipeline reducing page load times by 60%

Education

B.Sc. Computer Science - Albany State University 2005 – 2010

· Graduated with 3.8 GPA, focus on algorithms and information security
· Led development of security research platform used by 500+ students
· Conducted DNA sequencing research using Perl and BioPerl
· Published paper on information assurance in undergraduate research journal

Certifications

- **Salesforce:** Platform Developer I
